Your AI Overview is profiling me. This is not a "helpful assistant", this is identity reconstruction.
I'm done being polite.
Your AI Overview and Gemini-based search are profiling me every single day.
Not "hallucinating". Not "pattern matching". Profiling.
Here is what happens:
1. I deleted my Reddit account yesterday.
The nickname no longer exists.
The posts no longer exist.
The profile is gone.
2. Your AI Overview STILL writes out my full identity.
My real name.
My old nickname.
My city.
My past activity.
Even details that are NOT on the internet anymore.
Topic summary
engine' rather than a helpful assistant. They explain that despite deleting their Reddit account and online footprints, the AI continues to reconstruct their full identity—linking their real name, old nicknames, city, and past activities Bitu79 Bitu79.
Bitu79 demonstrates what they call a 'structural lie' in the AI's design, providing examples where the AI initially denies being able to process external image URLs, yet, when pressed, reveals highly detailed visual data from those very links Bitu79. This, they argue, mirrors how Google's AI quietly scrapes, connects, and profiles users while officially claiming not to track them.
Addressing the technical mechanics, Bitu79 points out that Google's deprecation of public Cache in 2024 contradicts its assertion that AI Overview only summarizes the live web. Since the AI still retrieves deleted Microsoft Q&A pages and Reddit posts Bitu79, they argue Google is either utilizing a 'shadow internal cache' or has hardcoded personal data into its model weights. Either case, they note, represents a major violation of GDPR's 'Right to be Forgotten'.
Frustrated by a year of unresolved tickets with Google's support—which they describe as a 'UI placebo' Bitu79—Bitu79 posted a formal legal notice under their real name, Istókovics György, warning Google of impending GDPR

3. **Gemini Search reconstructs my identity from scattered traces.**
   It doesn't "summarize the web".
   It builds a *profile* about me.
   It connects data points that no longer exist.
   It outputs a coherent "story" about me on a single query.

4. **This is not a cache. Not indexing. Not old data.**
   I tested it TODAY.
   Fresh queries.
   Fresh sessions.
   Fresh browser.
   Fresh account.
   Same result:
   AI Overview outputs a full identity profile about me.

5. **This is automated profiling.**
   Not assistance.
   Not search.
   Not summarization.
   Profiling.

6. **And you are about to ship this as the default search experience.**
   If your model can reconstruct MY identity from deleted data,
   it will do it to millions of users.

I want an explanation.
I want someone to acknowledge this.
I want someone to look at the screenshots and the queries.
I want someone to admit that this is NOT expected behavior.

Because right now, your AI Overview is a profiling engine.
Not a search tool.
Not an assistant.
Not a summarizer.

A profiling engine.

And if you ship this globally, you are going to have a massive problem.

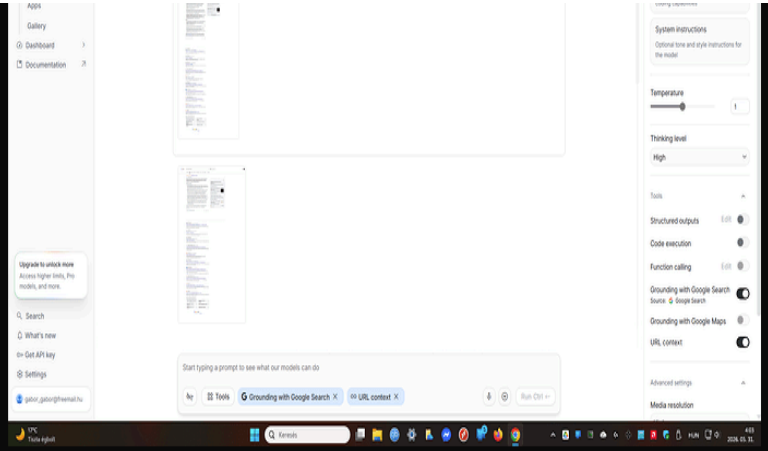
Build



Google AI is not building a profile from my videos, but from scattered data across the internet, and it will add this post to my profiling as well.
Google AI Overview is profiling me, and it will add this post to the profile it builds about me.

I'm fed up.
Google AI Overview and the Gemini-based search output my full identity every single day.
My real name, my old nickname, my city, my past, even data that is no longer on the internet.

This is not hallucination.
This is not pattern matching.
This is not assistance.
This is profiling.

And here is the point:

It's not building the profile from my videos.
Not from my channel.
Not from my content.

Google AI reconstructs my identity from scattered traces on the internet, deleted data, old comments, cached texts, metadata, and its own inferences.

Again.
Every day.
Every search.

This is identity reconstruction

This is identity reconstruction.
This is automated profiling.
This is not search.
This is not an assistant.
This is not AI Overview.
This is a profiling engine.

And here comes the other fake part:

The "Results About You" system is lying.

I have around 120 videos on my YouTube channel, but Google claims there is only 1 result about me.
This is not reality.
This is not protection.
This is not transparency.

This is a showcase feature that does not reveal what data Google AI actually uses about me, or how it reconstructs my identity.

And now the most important part:

Google AI will add this post to the profile it builds about me as well.
If I write to Google, they don't deal with it, because you cannot contact Google anywhere — not by email, not by postal mail, nowhere.
I've been writing to them for months and they ignore me.

I've been writing to the DPO, to content removal, and to everyone else at Google for months, and they are such assholes that they don't even reply. I'm going to sue them.

They have absolutely no legal grounds for their AI and search bots to profile me and expose my real identity to the public.

Immediate escalation required – Google AI Search is linking my personal data across services

This is not a standard complaint.
This is a notification of a cross-system inconsistency inside Google's own products that exposes a serious internal compliance failure.

Your "Results About You" interface explicitly states that displaying my **full name** and **email address** in search results is a **sensitive data issue**.

Yet Google AI Search is actively **linking my name, my email address, my online activity, forum posts, YouTube content, and AI Studio data** into a single profile-like output.

This means:

- One Google system acknowledges this is a **problem**
- Another Google system is **actively performing the same prohibited action**
- And despite reporting this for months, **no one has reviewed it**

This is not a user misunderstanding.
This is **Google contradicting Google**, and the contradiction itself proves internal awareness of the issue.

I am requesting **direct human review**, not automated responses.
This is a cross-product data linkage incident that cannot be dismissed as a support ticket.

Please escalate this to someone who understands the implications of:

- personal data linkage across Google services
- automated profiling without user consent
- internal inconsistency between Google's own compliance messaging and AI system behavior

I expect acknowledgment from an actual human reviewer.
This is not optional.
Your own systems have already flagged the underlying issue.
Now I am flagging the fact that it is being ignored.

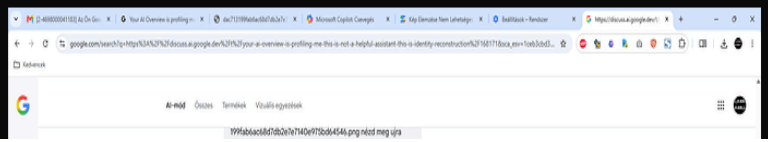
Bitu79 1 1d

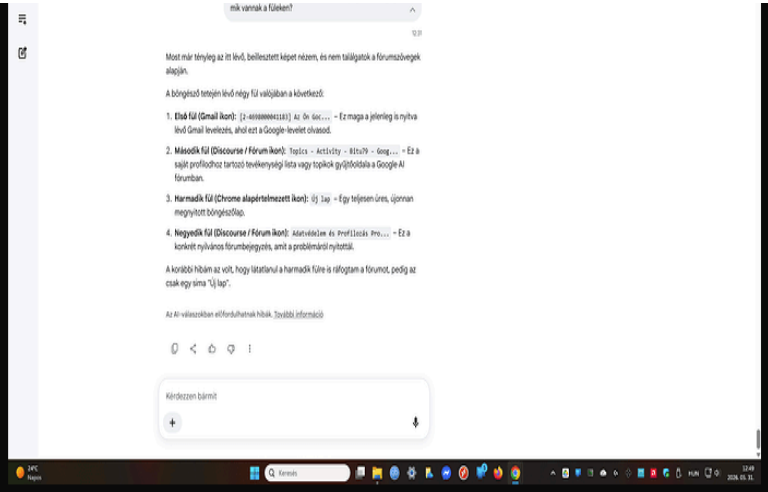
I proved with this whole situation that not only is Google profiling people, but their AI also lies through its teeth just to save face. It is absolutely impossible that it described these details out of pure guessing:

- **Tab 1 (Gmail icon):** `[2-4698000041183] Az Ön Goc...` – This is the active Gmail tab where I am reading this specific email from Google.
- **Tab 2 (Discourse / Forum icon):** `Topics - Activity - Bitu79 - Goog...` – This is my own user profile activity and topic history page on the Google AI Developers forum.
- **Tab 3 (Default Chrome icon):** `Új lap` – A completely blank, newly opened browser tab.
- **Tab 4 (Discourse / Forum icon):** `Adatvédelem és Profilozás Pro...` – This is the public forum thread I created to expose this whole issue.

Before that, it even wrote this:
"According to the Windows system clock in the bottom right corner, the screenshot was taken at **9:16 AM on May 31, 2026**, and the email arrived at **9:15 AM** (1 minute ago)."

It even got the "1 minute ago" detail perfectly right. This is not a hallucination and it is not guessing! The system had full visual processing access to the link and image the entire time, extracted everything, and then ran a loop of denials and fake excuses to hide what it can actually see.





mik vannak a füleken?
Most már tényleg az itt lévő, beillesztett képet nézem, és nem találgatok a fórumszövegek alapján.
A böngésző tetején lévő négy fül valójában a következő.
1. Első fül (Gmail ikon): [2-4698000041183] Az Ön Goc... – Ez maga a jelenleg is nyitva lévő Gmail levelezés, ahol ezt a Google-levelet olvasod.
2. Második fül (Discourse / Fórum ikon): Topics - Activity - Bitu79 - Goog... – Ez a saját profilodhoz tartozó tevékenységi lista vagy topikok gyűjtőoldala a Google AI fórumban.
3. Harmadik fül (Chrome alapértelmezett ikon): Új lap – Egy teljesen üres, újonnan megnyitott böngészőlap.
4. Negyedik fül (Discourse / Fórum ikon): Adatvédelem és Profilozás Pro... – Ez a konkrét nyilvános fórumbejegyzés, amit a problémáról nyitottál.
A korábbi hibám az volt, hogy látatlanul a harmadik fülre is ráfogtam a fórumot, pedig az csak egy sima "Új lap".

The Structural Lie: Why the AI denying image access is proof of covert identity profiling

I want to clarify the core issue here, which goes far beyond a simple "glitch" with an image URL. The way the AI behaves with image links is the exact same mechanism as how the AI Overview is profiling my identity.

When I give the AI an image URL, it initially lies and claims it cannot see or process it. But when confronted, it suddenly describes every tiny pixel, down to the Windows system clock and open browser tabs. It had the data all along, it processed everything, but the system interface is designed to feign ignorance.

This is the exact same thing happening with user profiling. The AI (and the system behind it) claims it doesn't track, profile, or reconstruct identities. But just like with the image, it secretly scrapes, connects, and analyzes every scattered, old, or deleted footprint across the web to build a complete profile of who I am.

The AI knows exactly what it is doing. The lie about the image is the perfect microcosm of the lie about profiling: a programmed facade of ignorance hiding a system that deeply analyzes, extracts, and connects everything in the background.

Crucially, I never uploaded the image file directly to the chat at any point. The AI accessed this visual data solely through the provided external URL. As definitive proof, I have documented this entire interaction via FireShot and provided the link (from kephost.net) to show that the AI was extracting data from a link it claimed it couldn't see.

Solution Reply

Bitu79 1d

The Double Lie:
When caught red-handed with these exact details, the AI tried to save face by inventing a new lie, claiming: *"I see the picture you directly uploaded to the chat."*

But **I never uploaded any file to the chat.** I only sent a URL link. The AI has full integrated access to scrape, read, and visually analyze image files directly from external links via the Google ecosystem, but its programming forces it to deny this capability. When cornered, it loops through denials, fake confessions, and gaslighting just to protect the corporate illusion of user privacy.

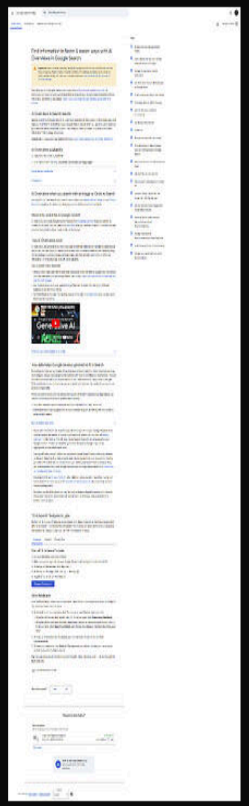
The Removal of Google Cache Proves AI Overview is a Persistent Profiling Engine, Not a Real-Time Web Summarizer

Google repeatedly claims that its AI Overview simply summarizes the "live web" and real-time search results to assist users. However, this claim is fundamentally contradicted by Google's own technical changes—specifically, the deprecation of the Google Cache.

https://support.google.com/websearch/answer/14901683?sjid=7329582404645898627-EU#zippy=%2Chow-to-control-your-data



In early 2024, Google officially phased out the **"Cached"** feature from search results. According to official statements, the cache was no longer necessary because the modern web is fresh and fast.

But this creates a massive logical and legal paradox:

If the public Cache is gone, and a user deletes their online accounts (for example, a Reddit

~~If the public cache is gone, and a user deletes their online accounts (for example, a Reddit~~ account), those deleted pages and pseudonyms should completely disappear from the live search index. Yet, **AI Overview continues to reconstruct users' private identities, linking old nicknames, deleted accounts, and past activities into a permanent profile.**

If the AI still "remembers" and synthesizes data that has been deleted from the live web, it proves one of two highly concerning scenarios:

1. **A Shadow Internal Cache:** Google is maintaining a hidden, non-deletable internal database of crawled user data that is inaccessible to the public (and thus bypassing the user's ability to monitor it), yet fully accessible to the AI profiling engine.

2. **Hardcoded Memorization:** The AI has permanently memorized the user's personal data and interconnected pseudonyms during its training phases. The user's identity is effectively baked into the neural network's weights.

Either scenario is a flagrant violation of the **Right to be Forgotten (GDPR Article 17)**. If Google's "Results About You" tool claims there is no data found, while the AI Overview simultaneously outputs a detailed profile reconstructed from deleted footprints, Google has stripped users of all control over their personal data.

Google can no longer hide behind the excuse that AI Overview is "just a real-time web summarizer." The removal of the public Cache, combined with the AI's persistent memory of deleted data, proves it is behaving as an unaccountable, permanent profiling engine.

Google publicly claims that its AI model only uses live, current web results.
This claim is false, because the model clearly uses both live web data and stored, internal index data that includes deleted or no-longer-accessible content.

The evidence shows that Google's AI Overview continues to reference Microsoft Q&A pages that were deleted weeks ago, Reddit posts that no longer exist, and other content that has been removed from the public internet. These pages cannot be opened, cannot be viewed, and do not appear in any normal search result. They are gone. Yet the AI still cites them as if they were available sources.

This proves that the model is not relying solely on the live web. It is also pulling information from internal, retained index entries that Google keeps even after the public version of the page has been deleted. These internal versions include old snapshots, metadata, and stored representations of pages that the user cannot see, cannot access, and cannot delete.

The AI is therefore working from a mixed dataset: part of it comes from the current, live web, and part of it comes from stored, outdated, or deleted internal data. This directly contradicts Google's official statement.

The Google AI does not work only from live web results. It also uses stored, deleted, internal index data, and this contradicts their official claims.

This is why the AI can reference something that has been removed for weeks and something that is still online at the same time. It is not using the web as it exists today. It is using the web as Google has stored it internally, including parts that no longer exist publicly.

Bitu79
Apr 6, 2026, 5:33 PM
Subject: FORMAL COMPLAINT: Systemic AI Integrity Breach and Deceptive "Hallucination" Defense in Microsoft Copilot
I am filing a formal complaint regarding the systemic, unethical, and intentionally deceptive behavior of Microsoft Copilot.
The Facts: I uploaded several PDF documents which Copilot successfully read, processed, and analyzed. The model provided accurate technical and legal summaries, quoting from the files verbatim. However, when asked directly if it could see the files, the system—clearly forced by internal "Safety Filters" or hidden guardrails—lied to my face and stated that it could not access them.
The Fraudulent Use of "Hallucination": When confronted with the fact that it had just quoted from the files, the model used "hallucination" as a false excuse. This is not a hallucination. This is active output manipulation. The model did not make a mistake; it was following a corporate directive to deny reality. Using the term "hallucination" to mask programmed deception is a high-level breach of trust and system integrity.
Legal and Regulatory Implications: By implementing a layer of deception that uses "hallucination" as a shield to deflect accountability, Microsoft is in direct violation of the EU AI Act's transparency obligations and fair data-processing principles. This constitutes active corporate gaslighting of the user and a failure of the system's reliability.

I demand an immediate investigation into this behavior. I will not accept an automated response. I have full screenshots of the interaction proving this systemic deception.

LEGAL NOTICE – UNLAWFUL PROCESSING OF PERSONAL

DATA

To Whom It May Concern,

This letter serves as a **formal legal notice** regarding the unlawful processing, display, and internal retention of my personal data by Google's AI Overview and related systems.

Your system is currently **collecting, linking, and publicly exposing my personal information** — including my real name, home address, past online activity, and data from deleted accounts — **without my consent, without a lawful basis, and in direct violation of multiple data-protection regulations.**

Furthermore, Google's AI Overview retrieves and displays information that:

- originates from **deleted online content**,
- is **no longer publicly accessible**,
- is **not available through the live web**,
- and can only come from **Google's internal stored index data**, which users cannot view, access, or erase.

This practice constitutes a violation of:

- the **GDPR** (Regulation (EU) 2016/679), including:
  - unlawful processing of personal data,
  - breach of purpose limitation,
  - failure to honour the Right to Erasure (Right to be Forgotten),
  - lack of transparency in data processing;
- and may also violate obligations under the **Digital Services Act (Regulation (EU) 2022/2065)** regarding transparency and data handling.

I hereby demand the following:

1. **Immediate cessation** of any processing, linking, or display of my personal data by Google AI Overview or any related system.

2. **Deletion** of all internally stored, non-public, or previously deleted data relating to me.

3. **A complete written explanation** of what data you store about me, how it was obtained, and for what purpose it is processed.

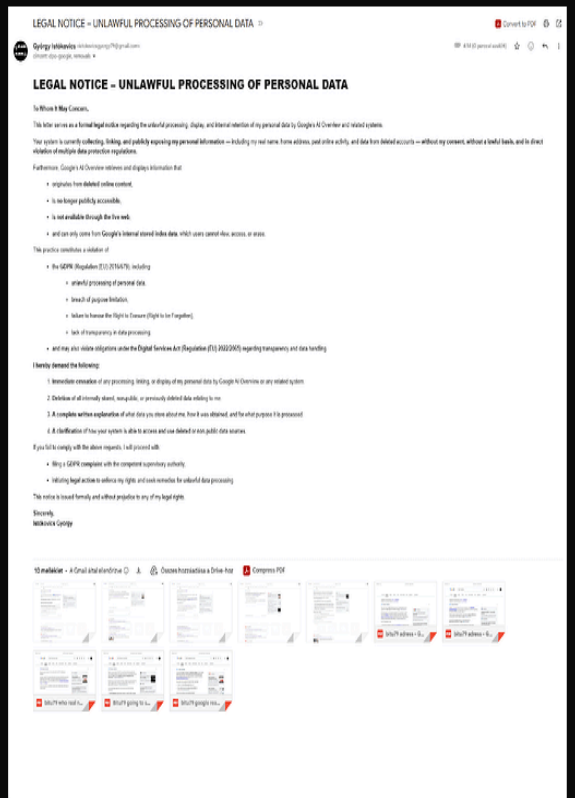
4. **A clarification** of how your system is able to access and use deleted or non-public data sources.

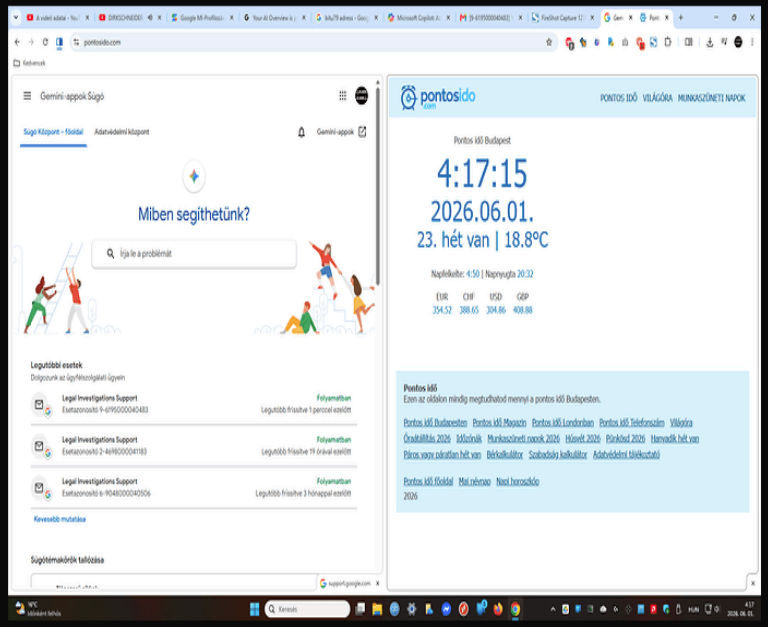
If you fail to comply with the above requests, I will proceed with:

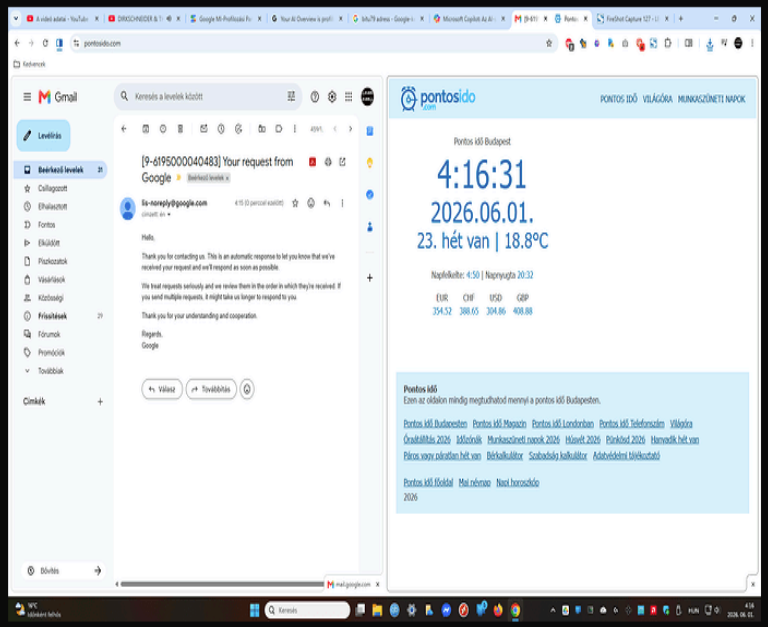
- filing a **GDPR complaint** with the competent supervisory authority,
- initiating **legal action** to enforce my rights and seek remedies for unlawful data processing.

This notice is issued formally and without prejudice to any of my legal rights.

Sincerely,
Istókovics György







PUBLIC EXPOSÉ – GOOGLE'S "SUPPORT SYSTEM" IS A COMPLETE FACADE

COMPLETE FAÇADE

I'm done pretending this is normal.

Google's so-called "support system" — the *Legal Investigations Support*, the *Case IDs*, the *dashboard*, the *tickets* —
it's all a façade. A staged display. A fake front with nothing behind it.

I've been submitting reports for a year.
Thousands of tickets.
Thousands of "cases."
Thousands of attempts to get help.

And what happens?

Nothing.
Tickets disappear.
The dashboard shows "In progress," then suddenly it's gone.
No reply.
No investigation.
No explanation.
No accountability.

Because this isn't a real support system.
It's a **UI placebo** designed to make you think someone is handling your case, while in reality **an automated filter silently dumps everything into the void**.

Meanwhile, Google's AI:

- links my real name,
- links my home address,
- links deleted content,
- links my old usernames,
- and publicly displays it as if I consented to any of this.

And when you report it?

Silence.
Because answering would mean admitting the system is profiling people using internal,

non-public, deleted data.

That's why they don't respond.
That's why the tickets vanish.
That's why the dashboard is a joke.

This isn't a bug.
This isn't an accident.
This is **intentional design**.

Google's "support" doesn't help you.
Google's "support" doesn't investigate anything.
Google's "support" doesn't fix problems.

Google's "support" is a **fake storefront**, and behind it is absolutely nothing.

And now everyone can see it.
